

AAKANKSHA HEDAU

Software Engineer | C#, C++, Java & Full-Stack Development

Bengaluru, Karnataka, India | +91 9623653017 | aakanksha0499@gmail.com | linkedin.com/in/aakanksha-h-59375115b/ | github.com/Akanksha-H

PROFESSIONAL SUMMARY

Software Engineer with hands-on programming experience in Java (Spring Boot), C#/.NET, C++ and JavaScript/React, and a solid grounding in object-oriented programming, data structures, and SQL-based database design. Background spans building REST APIs and microservices, implementing authentication/authorization pipelines (Spring Security, JWT, OAuth2), and developing full-stack web applications following SOLID design principles. Complements this with strong analytical rigor from QA and test-engineering work — writing test plans, validating API contracts, and debugging across the stack — giving a practical understanding of how code is consumed, tested, and shipped. Comfortable working with cross-functional and geographically distributed teams in Agile/Scrum settings, and quick to pick up new technologies and domain knowledge. Currently pursuing a Post Graduate Diploma in Advanced Computing (C-DAC), building and containerizing REST API services with Docker and Kubernetes.

CORE SKILLS

- **Programming Languages:** Java, C#, JavaScript (ES6+), Python, C++
- **Object-Oriented Programming:** OOP design, SOLID principles, applied across Java (Spring Boot) and C#/.NET services
- **Data Structures & Fundamentals:** Core data structures, systems engineering, and Operating System fundamentals (via C-DAC PGDAC)
- **Database & SQL:** Strong SQL (MySQL) — schema design, queries, data validation
- **Frameworks & Platforms:** Spring Boot, Spring Security, .NET, React.js, RESTful APIs, Microservices, JWT/OAuth2
- **Front-End:** React.js, JavaScript (ES6+), HTML5, CSS3
- **DevOps & Tooling:** Docker, Kubernetes, Jenkins (CI/CD pipelines), Git, GitHub, JIRA, Confluence
- **Testing & Quality Engineering:** Selenium, JUnit, XUnit, NUnit, Postman, defect lifecycle management, Requirement Traceability Matrix (RTM)
- **Process & Collaboration:** Agile/Scrum, cross-functional and cross-geography collaboration, requirement analysis, sprint planning

WORK EXPERIENCE

Quality Analyst Intern — PearlThoughts

June 2024 – July 2024

Tamil Nadu, India

- Worked closely with engineering teams to understand product requirements and translate them into a Requirement Traceability Matrix (RTM) mapping specifications to test coverage.
- Debugged and isolated defects across the application stack, collaborating with developers to reproduce, fix, and verify issues, improving release stability.
- Tracked engineering workflow and status across JIRA and Trello for two Scrum teams, improving synchronization and visibility across releases.
- Participated in daily stand-ups and requirement-gathering sessions with cross-functional technical teams to support consistent sprint alignment.

EDUCATION

Post Graduate Diploma in Advanced Computing — C-DAC

February 2026 – August 2026 (In Progress)

Chennai, India

- Building and testing REST API services (Java Spring Boot, .NET) with exposure to containerized deployment (Docker, Kubernetes) as part of end-to-end testable system design.
- Training in systems engineering, core data structures, and Operating System fundamentals.

Bachelor of Engineering (B.E.) — Nagpur University

India | CGPA: 8.60 / 10.00

CERTIFICATIONS

Fellowship Program Certification — Bridgelabz

August 2022 – April 2023

India

- Completed an intensive program covering full-stack and RESTful API development, automation testing, and Agile/Scrum practices.
- Designed and implemented unit and functional test frameworks (JUnit/NUnit-style) applying OOP principles to identify code execution boundaries and edge-case defects.
- Built and tested RESTful APIs and microservices, applying automated checks to validate functional correctness across service layers.

ADDITIONAL PROJECTS

Flowflix — OTT Media Streaming Platform

Ongoing

Frontend & Deployment Lead | Backend Contributor

- Built a full-stack application with a Java Spring Boot backend and a React.js frontend, structuring the codebase as a multi-layered, service-oriented architecture.
- Contributed to backend development in Java Spring Boot alongside frontend work, including API endpoints and service-layer logic.
- Designed and built a token-based authorization pipeline (Spring Security, JWT, Google OAuth2) as part of the Java Spring Boot API architecture.
- Set up and maintained a CI/CD pipeline using Jenkins, with Docker for containerization and Kubernetes for orchestration, automating build, test, and deployment.
- Owned end-to-end database management using MySQL, including schema design, queries, and data validation for the platform.
- Carried out API testing using Postman to validate endpoint functionality, request/response contracts, and edge cases across the backend services.
- Applied SOLID object-oriented design principles while pair-programming within an Agile Scrum model, and validated components through structured functional testing.

Open-Source Contributor — GitHub Ecosystem

Ongoing

- Read and analyzed code logic across full-stack repositories (React, Python, C++, Java), fixing defects and submitting descriptive Pull Requests reviewed by maintainers.
